Subject: **RE-4 Relay Emergency Valve Obsolescence**

Effective immediately, the RE-4 relay emergency valve is obsolete. However, it can be directly replaced with the RE-6 relay emergency valve. Details on replacing the RE-4 (piece numbers 229434 and 277446) with the RE-6 follow.

229434

To change over from RE-4 piece number 229434 to the RE-6, order pc. no. 800097, which includes an RE-6 relay emergency valve and reservoir adapter components. Also, two tee fittings are included in 800097 for unusual circumstances (for example, tri-axle trailer applications) where the RE-6 may need six delivery ports. Part number 800097 is only needed in order to reservoir mount the RE-6 or for tri-axle trailer applications.

277446

To change over from RE-4 piece number 277446 to the RE-6, order piece number 800098. Reducer bushings and pipe plugs are included with 800098 to maintain proper port thread sizes.

Piece numbers 800097 and 800098 include detailed change over instructions.

Make note of the following change overs on catalog pages 03-B-6 and 03-B-7

OBSOLETE RE-4 PC. NO.	DIRECT REPLACEMENT RE-6
229434	800097
277446	800098
